SUMMARY

Senior Software Engineer with 6+ years designing and delivering secure, large-scale authentication and identity platforms across multiple consumer brands. Deep expertise in OIDC-based auth, token management, and high-traffic JVM platform migrations, with strong ownership of production reliability through on-call and operational excellence. Drives cross-team initiatives end to end.

TECHNICAL SKILLS

Languages: Java, Kotlin, Python, TypeScript, JavaScript

Frameworks: Spring Boot, Dropwizard, React, Redux, Meteor.js, Express.js

Auth & Identity: OIDC, Social Login, token validation & provisioning, password hashing

Data & Infra: Cassandra, MySQL, MongoDB, Kafka, Docker, Kubernetes, AWS (EC2)

Testing & Ops: JMeter, BlazeMeter, Locust, Rollbar, PagerDuty, ETL pipelines

EXPERIENCE

Expedia Group | Software Engineer 3

May 2022 – Present

- Designed and own the common-auth library adopted by internal service teams to manage authentication tokens, configuring token validators, token provisioning, and access to token claims, establishing a reusable standard across the organization.
- Led the design and implementation of Unified Partner Login for Vrbo, streamlining partner authentication across the platform.
- Drove integration of Vrbo into the One Identity / One Key initiative, merging Expedia, Hotels.com, and Vrbo identity and loyalty systems; owned user migration and session upgrades across US and Rest-of-World points of sale.
- Upgraded the Dropwizard framework across services and migrated them to Kubernetes, modernizing the deployment platform and improving scalability and operability.
- Decommissioned a legacy encryption service by migrating dependent services to a new password-hashing service, migrated services off legacy Kafka onto the standardized Expedia Group platform, and built load-testing frameworks (JMeter, BlazeMeter, Locust) to validate performance at scale.
- Drove AI adoption across the team. Built custom agent skills, made repositories AI-ready, and led internal AI workshops to upskill engineers and accelerate developer productivity.
- Sustain production reliability through on-call rotation. Resolved customer support tickets and reported bugs, including stabilization work following the One Identity migration.

Java, Kotlin, Spring Boot, Dropwizard, OIDC, Social Login, Cassandra, MySQL, Kafka, Docker, Kubernetes, Python

AM RE Syndicate Inc. | Software Engineer

Nov 2020 – May 2022

- Built an Insurance Statement Review System that improved review accuracy, minimized human error, and tracked business growth.
- Optimized query performance to improve filtering functionality by 75%.
- Set up and integrated Docker, Rollbar, and PagerDuty across development, staging, and production environments.
- Built a cron-scheduled ETL pipeline to ingest data into analytics and finance tooling.

React, Meteor.js, Express.js, MongoDB, Redux, TypeScript, Docker

Digital Reasoning | Machine Learning Research Intern

Jun 2020 – Sep 2020

- Researched and built an end-to-end mixed-language speech transcription model on SEAME Mandarin audio (DeepSpeech 2), with audio-segmentation pipelines for experiments; also modeled a Ghazal recommendation system using N-gram modeling and data visualization.

PyTorch, Python, Pandas, NumPy, NLTK, BiGRU/LSTM, AWS EC2

OPEN-SOURCE PROJECTS

- OpenFinStack — Open-source, self-hosted personal and household finance management application.
- OpenFodder — Open-source, self-hosted calorie and nutrition tracking application.

EDUCATION

M.S. in Computer Science, The University of Texas at Arlington

Aug 2018 – May 2020
